PhotoFilm Customization

Our most versatile customization option- Allows unlimited color and designs

The PhotoFilm Process

Our PhotoFilm process begins with a thin, high-quality urethane film. Your custom lettering, logo, or photo is then printed on the film using permanent pigments. The film is then CNC cut into the desired shape We then permanently apply the urethane to the canvas panel. PhotoFilm allows for gradients, photos, complex lettering, and unlimited colors- unmatched customization. We can even die-cut large designs for a truly custom look.

Examples

Blocks, Ovals, Circles

Interior content is printed with a cutline around the background.

Die Cut Design

Content is "cut out" from background. Not all art is eligible, so please request a quote.

PhotoFilm & Thermofilm

Please call for quote. This is a good option for logo & text combinations.

## Imprint Size Guidelines

Canvas Back
4.75"h x 13"w per side

Canvas Seat
9" x 10"

Artwork Requirements

For our standard PhotoFilm process, we can use any standard raster or vector graphic file (.jpg, .gif, .ai, .eps, etc...). As with any printing process, higher resolution, high quality art files will produce higher quality prints.

Standard PhotoFilm Die Cut Shapes

Here are some examples of standard background shapes. Any shape that is one continuous cutline will qualify as a standard shape.
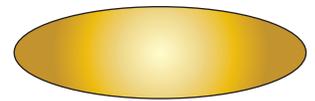

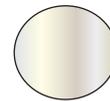

Custom Die Cut Requirements

Our die-cut process can utilize any standard raster or vector graphic file as well. However, in order to CNC cut the design, vector artwork must be provided or created. Our graphic design department can create vector artwork from a supplied raster graphics file (.jpg, .gif, .tif, etc...)*. As with our other customization options, we will provide a proof of the design for approval prior to production.

*Vector Artwork Required. Additional charges may apply if vector art n/a.
**Additional Fonts & Film Colors Available. Additional charges may apply.
