

# ThermoFilm Customization

## The ThermoFilm Process

Our ThermoFilm process begins with a thin, high-quality vinyl film in the color of your choice. Your custom lettering or logo is then CNC cut into the film. Then, we permanently apply the vinyl transfer to the canvas panel. The precision of this process allows crisp, fine lines, perfect lettering, and complex logos that may not be possible with our traditional screening process. This process also eliminates the need for costly screens, saving cost while delivering consistent quality.

## Examples

<p>Stock Fonts Only</p>  <p>Up to 3 lines of text. Choose from any of our 30 stock fonts.</p>	<p>Single Color Logo</p>  <p>Die-cut designs for custom artwork. Vector art file required.</p>	<p>Multiple Colors</p>  <p>Colors must be separated. Please call for quote.</p>
---	--	--

## Imprint Size Guidelines
